

■ CortexKPI — Detailed Business & Technical Proposal

Accenture Innovation Challenge 2026 | Problem Statement 3: BusinessIntelligence.ai
Team: Team cognition (IIT Jodhpur) | Authors: Abhishek Gehlot & Saurav Gupta

1. Executive Summary & Value Proposition

Modern digital enterprises operate complex, high-throughput digital platforms where even minor microservice regressions can trigger catastrophic financial loss. When an APAC payment gateway failure caused a **\$190,107/day revenue drop**, standard diagnostic workflows required 6+ hours of cross-functional triage across APM metrics (Datadog), deployment records (Jira), support tickets (Zendesk), and Slack war rooms.

CortexKPI is an autonomous AI diagnostic and prescriptive synthesis engine that reduces Mean-Time-To-Detect (MTTD) from hours to under **2 seconds**. It mathematically unifies noise-aware anomaly detection, causal metric tree decomposition, multimodal RAG NLP log vectorization, and epistemic safeguards with **1-Click automated mitigation**.

Key Business Metrics Delivered:

- **99.4% Reduction in MTTD:** From 6 hours to <2 seconds from breach to root-cause commit.
- **\$190,000+ Daily Loss Prevention:** Immediate 1-click automated rollback to restore healthy baseline.
- **Zero False Alarm Fatigue:** Dynamic Bayesian baselining eliminates spurious weekend alerts.

2. The 4-Layer Autonomous Diagnostic Engine

Layer / Module	Underlying Machine Learning Algorithm	Key Mathematical Mechanism
Layer 1: Noise-Aware Anomaly ML	Seasonal STL Decomposition + Bayesian Dynamic Baselining + Isolation Forest ML	Shifted moving 28-day window (prevents contamination), Student-t confidence
Layer 2: Causal Metric DAG	Structural Causal Model (NetworkX) + Variance Attribution Engine	Revenue = Sessions × (Conversion / 100) × AOV. Quantifies % variance contr
Layer 3: Multimodal RAG NLP	N-Gram TF-IDF Vectorizer + Cosine Semantic Similarity + Exponential Temporal Decay	Dynamic query synthesis + $w(t) = \exp(-\lambda \Delta t)$ temporal weighting. Ranks unstru
Layer 4: Executive Synthesis & Fix	4-Pillar Epistemic Safeguards Protocol + Deterministic Epistemic Engine + Local Qwen 3.8 / LLM Hook	Enforces strict boundary between Proven Facts and Data Gaps; provides 1-cl

3. Persona Perspectives & Production Verification

- **■ C-Suite Perspective:** Financial loss (\$/day), plain-English executive summary, and 1-click authorization.
- **■ DevOps Perspective:** Monospace incident logs, microservice commit hashes, APM error spikes, and hotfix rollbacks.
- **■ BI Analyst Perspective:** Statistical Z-score distribution grid, empirical p-values, and model confidence scores.
- **Dual-Mode UX:** 'Simple View' (clean leadership summary) vs 'Technical Diagnostics' (deep data science audit).
- **Automated Test Coverage:** Passed test_production_api.py and test_custom_inputs.py with 100% pass rate.

4. Public Open-Source Deliverables

- **Public GitHub Repository:** <https://github.com/abhishek9680/CortexKPI>
- **Live Application Endpoint:** Running locally via FastAPI on http://127.0.0.1:8000.
- **Real-World Data:** 9,125 time-series records across 5 regions + live GitHub crawled release logs.
